

PROMIXCO LIMITED

Hospital Furniture Manufacturing • Made in Bangladesh

MONTHLY NEWSLETTER | JUNE 2026

Welcome to the June 2026 edition of the Promixco Limited (PL) newsletter. This month, we look at the state of the hospital furniture sector in Bangladesh and share an update on PL's role as the country's first local manufacturer to meet peak domestic demand for hospital furniture without reliance on imports.

1st Local manufacturer of hospital furniture in BD	100% Peak domestic demand met in June 2026	0% Import dependency for core product lines

HOSPITAL FURNITURE MARKET — BANGLADESH, JUNE 2026

Bangladesh's healthcare infrastructure continued its steady expansion through June 2026, with new hospital wings, diagnostic centers, and upazila health complexes coming online across Dhaka, Chattogram, Sylhet, and Khulna divisions. This continued growth kept demand strong for essential hospital furniture — patient beds, bedside cabinets, trolleys, examination tables, wheelchairs, and storage cabinets — as facilities worked to furnish new capacity and replace aging equipment.

Historically, a large share of this demand was met through imports from India, China, and Southeast Asia, exposing hospitals and clinics to currency fluctuation, long lead times, and shipping delays. June 2026 marked a turning point: for the first time, domestic manufacturing capacity — led by Promixco Limited — was able to absorb the full volume of peak-season orders, reducing the sector's reliance on imported furniture.

PROMIXCO LIMITED: MEETING PEAK DOMESTIC DEMAND

As Bangladesh's first dedicated hospital furniture manufacturer, Promixco Limited reached a significant milestone in June 2026 by meeting maximum domestic demand entirely through local production. Key highlights from the month include:

- ✓ **Full order fulfilment** — PL completed 100% of confirmed June orders from hospitals, clinics, and diagnostic centers on schedule, with no backlog carried into July.
- ✓ **Expanded production capacity** — Additional shift capacity at PL's manufacturing facility allowed output to scale in line with peak-season orders.
- ✓ **Local sourcing** — Continued use of domestically sourced steel and components helped keep lead times short and pricing stable for buyers.

- ✓ **Quality and standards** — All units shipped in June were manufactured to PL's standard hospital-grade specifications for durability, hygiene, and ease of maintenance.
- ✓ **Nationwide reach** — Deliveries went out to healthcare facilities across multiple divisions, including several first-time institutional buyers.

WHY IT MATTERS

THE TAKEAWAY FOR PROCUREMENT TEAMS

Meeting peak domestic demand as a local manufacturer is more than a production milestone — it signals a shift in how Bangladesh's healthcare sector can source essential furniture. For hospital administrators and procurement teams, this means shorter lead times, after-sales support within the country, and pricing that is less exposed to import duties and currency swings. For Promixco Limited, it reinforces our position as the reliable, homegrown choice for hospital furniture in Bangladesh.

LOOKING AHEAD

Heading into the second half of 2026, Promixco Limited will continue investing in production capacity and product development to stay ahead of rising demand from both public and private healthcare providers. We remain committed to being the manufacturer Bangladesh's hospitals can depend on.
